MEMORANDUM **Planning Division – CC Memo No. 14-125**

DATE: NOVEMBER 20, 2014

TO: MAYOR AND COUNCIL

THRU: RICH DLUGAS, CITY MANAGER RD
MARSHA REED, ASSISTANT CITY MANAGER MR
JEFF KURTZ, PLANNING ADMINISTRATOR
KEVIN MAYO, PLANNING MANAGER KM

FROM: SUSAN FIALA, CITY PLANNER SF

SUBJECT: ZUP14-0018 VERIZON – PASEO DEL ORO

Request:	Use Permit approval to install a monopalm wireless communication facility
Location:	3150 N. Alma School Rd., northwest corner of Alma School and Elliot roads
Applicant:	Steve Ciolek, Coal Creek Consulting
Zoning:	Planned Area Development (PAD)

RECOMMENDATION

Planning Commission and Planning Staff, finding consistency with the General Plan, recommend approval subject to conditions.

BACKGROUND

The request is for Use Permit approval to install a monopalm wireless communication facility at 3150 North Alma School Road, northwest corner of Alma School and Elliot roads. The proposed monopalm is 55 feet tall, measured to the top of antennas. The monopalm would be placed adjacent to a fenced retention area in the service area. The nearest residential development is the Elliot Place condominiums, approximately 100 feet to the west of the monopalm. Commercial, office, retail, and a preschool are surrounding land uses.

The Zoning Code requires a Use Permit for wireless communication facilities in non-industrial zoning districts that do not utilize existing poles or towers.

A monopalm is a cell tower disguised as a palm tree. The monopalm would be a Date Palm design, having a minimum of 65 fronds, and the antennas would be painted to match the fronds. The equipment enclosure would be eight feet high and constructed of concrete masonry units painted to match the color of the adjacent building. A state approved pre-fabricated equipment shelter would be contained within the enclosure. A solid metal gate allows access for routine maintenance.

Within the immediate area, there are no other suitable alternatives for co-location of the wireless communication facility on existing poles or towers. An inventory of existing facilities, vertical towers, and structures located within an approximate one mile radius was prepared by the applicant to assess alternative locations. Nine locations were analyzed to determine their feasibility for collocation on utility poles, street and parking lot lights, monopoles, and other verticalities. None of the locations met the frequency requirements and locational service needs. The inventory is attached.

Photographic simulations of the wireless communication facility illustrating existing views and proposed views were provided by the applicant. The simulations depict the equipment enclosure and monopalm as viewed from several locations. The photo-simulations are attached.

DISCUSSION

Planning Staff finds the proposed location to be appropriate for a wireless communication facility in the form of a 55 ft. monopalm, measured to the top of antennas. The monopalm design is appropriate at this location given the presence of palms in the adjacent neighborhood. The separation from the condominiums to the west is less than the 160 ft. distance of recently approved wireless facilities, however, a 55 ft. tall stealth monopole exists within the same center, about 80 ft. northeast of this monopalm, and approximately 55 ft. from the condos. No public input or known opposition has been received during the public notification process.

Given no public opposition to the location and the presence of another wireless facility in the same center, Planning Staff is of the opinion that permitting the monopalm at this specific location is consistent with the review factors examined as part of the Use Permit process.

PUBLIC / NEIGHBORHOOD NOTIFICATION

- This request was noticed in accordance with the requirements of the Chandler Zoning Code.
- A neighborhood meeting was held on August 28, 2014. No one other than the applicant attended.
- At the time of this writing, there is no known opposition to this request.

PLANNING COMMISSION VOTE REPORT

Motion to Approve:
In Favor: 7 Opposed: 0

RECOMMENDED ACTION

Planning Commission and Planning Staff, upon finding consistency with the General Plan, recommend approval of ZUP14-0018 VERIZON – PASEO DEL ORO, for a wireless communication facility, subject to the following conditions:

1. Development shall be in substantial conformance with approved exhibits. Expansion or modification of the use beyond approved exhibits shall void the Use Permit and require new Use Permit application and approval.

PROPOSED MOTION

Move to approve Use Permit, ZUP14-0018 VERIZON – PASEO DEL ORO, subject to the conditions recommended by Planning Commission and Planning Staff.

Existing Conditions
Verizon is committed to improving coverage and expanding network capacity to handle the growing number of wireless calls. Verizon is currently trying to address the "Gap in Service" by offloading calls and data usage from nearby existing sites. In response to poor service in the immediate area, Verizon Wireless would like to place a wireless communication facility at 3150 N Alma School Road. The parcel is currently zoned PAD (Planned Area Development) and is surrounded by other parcels zoned PAD

Nature of Request
Verizon Wireless proposes a new 55 foot wireless communication facility disguised as a faux palm tree. The Monopalm will match natural palm trees in the general vicinity. Coax cables will be routed within the truck of the palm, while the antennas and remote radios heads will be located in the fronds, painted to match. Associated equipment will be located inside the proposed shelter adjacent the new Monopalm.

The equipment area will reside adjacent the Monopalm within existing parking lot. The facility is screened by the existing building to the South and East. The facility is also screened by the 8 foot high CMU wall to the North and West. The equipment will be further screened from the parking lot by an 8 foot CMU wall that will be painted to match the existing structure of the shopping center.

After the initial construction the facility will not generate addition traffic in the neighborhood. Access to the proposed communication facility will be limited to routine maintenance, or in case of any technical breakdown. Typically, maintenance occurs once every 4-6 weeks and will utilize the existing driveway as access to the site. No existing vegetation will be removed in this proposal. The proposed Monopalm is setback 88' from the closest residential zoned district. The facility is also setback 137'-11" from the North property line, 190'-9" from the East property line, 63'-9" from the South property line, and 170'-5" for the West property line.

Feasibility Study
Collocating on existing structures is a priority for Verizon; per the zoning ordinance a 25 foot extension of an existing structure is allowed by right without applying for a Use Permit. Verizon considers existing structures as candidates prior to constructing a new tower.

#1 There is a 32 foot parking lot light which Verizon would like to extend, however to support antennas and radio heads the existing pole will need to be replaced. After conversations with the property owner and the staff, we believe a Monopalm design would be more appealing to the neighborhood from an aesthetic stand point.

#2 Locating antennas upon the commercial buildings would not produce the necessary height to cover the immediate area. The proposed 55 foot Rad center is the lowest height that will cover the area while maintaining a low profile.

#3 Crown Castle has a stealth light pole within the commercial shopping center. Collocating 12 antennas on the light pole will not maintain the stealth appearance and was eliminated as a potential candidate.

#4 Collocating on an existing Utility Poles was not feasible since SRP would not allow Remote Radio Head which requires power to the units on the existing structures. SRP has guidelines that prohibit wireless carriers running power cables up utility poles due to the safety of SRP technicians. Collocating on the existing utility poles within the area was not an option.

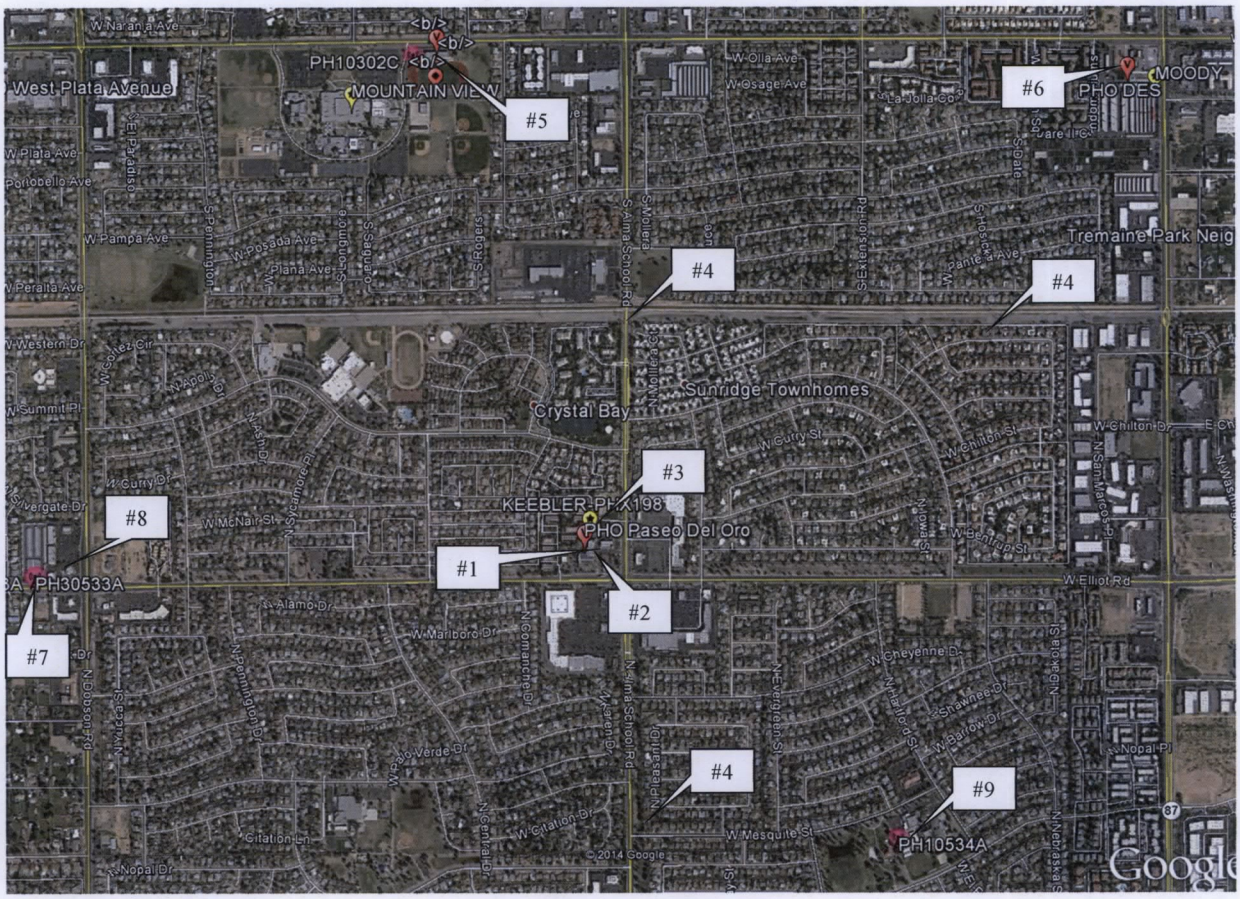
#5 Verizon as well as other carriers are located on the athletic field lights at Mountain View High School. An additional facility at the school will not cover the gap in coverage.

#6 Verizon has an existing Monopalm located within the storage facility at 2850 S Country Club. A new facility in this area will not cover the gap in coverage.

#7 T-Mobile has a stealth light pole within the commercial shopping center. Collocating 12 antennas on the light pole will not maintain the stealth appearance and was eliminated as a potential candidate

#8 AT&T has an existing Monopalm located within the storage facility. Collocating on an existing Monopalm is not an option and locating new facility in this area will not cover the gap in coverage.

#9 AT&T has an existing Monopalm located within the storage facility. Collocating on an existing Monopalm is not an option and locating new facility in this area will not cover the gap in coverage.



Conclusion

It is the goal of Verizon Wireless to service the area with more reliable cellular service. By working with the landlord to construct a stealth facility, Verizon is proposing the best possible coverage solution (from an appearance standpoint). As the area grows, residents in the immediate area will need reliable cellular service. The proposed wireless communication facility will not increase the vehicular or pedestrian traffic; nor will it emit odor, dust, gas, noise, vibration, smoke, heat, glare or lower property values in the immediate area. Approving this application will allow Verizon to continue providing the best service to its customers.
