PROSTATE FACTS

National Statistics:

- After skin cancer, prostate cancer is the most diagnosed cancer in American men and the *second leading cause of cancer death*.
- Prostate cancer is twice as common and has *more than twice the mortality rate* in African-American men as it has in Caucasian men.
- Approximately 232,090 new cases of prostate cancer will be diagnosed in the U.S. That represents *one man diagnosed with prostate cancer every two minutes*.
- Approximately 31,800 men will die from the disease. *That represents one man dying every seventeen minutes*.
- The lifetime probability of developing prostate cancer is *1 in 6 men*.

Arizona Statistics:

- 3,900 new cases and 550 deaths.
- After skin cancer, the most diagnosed cancer in Arizona, and the second cause of cancer death in men.

According To "POP"

- All men 40 years of age should have an annual digital rectal examination (DRE).
- All men 40 years and older should be offered a prostate specific antigen blood test (PSA) annually by their doctors. If not offered, men should request information about this test and insist on having a PSA evaluation.
- Men with a family history of prostate cancer and African-American men should be offered a DRE and PSA test annually *starting at age 37*. If not offered, these men should request information about this test from their doctors while mentioning their family history or racial risk and request that these exams be done.
- The 5-year survival rate for patients whose cancer is caught while still confined to the prostate is *100%*, while the 5-year survival rate for those men diagnosed with advanced cancer is only 34%.
- Prostate cancer often develops without symptoms. Annually testing with PSA and DRE can lead to early detection and cancer confined to the prostate that has a significantly higher cure rate. Awareness about the risk of prostate cancer is a critical issue for Arizona's families. *Know what your PSA numerical result is every year*. Do not accept. " your PSA is normal". Ask for the actual number. The value of PSA testing is the rate of change from one year to the next.
