Contractor shall provide all labor, materials and equipment to remove and dispose of spent GAC and provide and install virgin, food-grade lignite GAC that shall conform to AWWA B604, NSF ANSI 61 and all EPA and local regulations pertaining to the use of GAC in a potable water treatment facility.

GAC provided under this agreement shall be produced from lignite-based coal mined in North America, manufactured into activated carbon only in the United States. (Bituminous, peat, wood or coconut products are not acceptable).

GAC provided under this agreement shall meet the following physical properties:

Nominal Sieve Size, mesh	8 x 20
Screen Size, US Sieve Series, weight %	
Larger than No. 8 (maximum)	15%
Smaller than No. 20 (maximum)	5%
Maximum Fines, % by weight	1%
Minimum Iodine Number, mg/g	500
Maximum Moisture as packed, % by weight	8%
Minimum Abrasion Number (AWWA)	70
Effective size, mm	1.0 – 1.2
Maximum Uniformity Coefficient	1.5
Maximum Ash, % by weight	10%
Maximum Water Soluble Ash, % by weight	4%
Apparent Density, g/mL [lb/ft ³]	0.25-0.42 [22 – 26]

The following testing standards shall apply to GAC provided under this agreement:

Particle size distribution sieve analysis	AWWA B604, 5.2.5
Effective size	AWWA B604, 5.2.5.5
Uniformity coefficient	AWWA B604, 5.2.5.5
Moisture	AWWA B604, 5.2.3
Apparent density	AWWA B604, 5.2.4
Abrasion number	AWWA B604, 5.2.6
Iodine number	AWWA B604, 5.2.9 (ASTM D4607)
Total ash	AWWA D2866-83
Water soluble ash (water-extractables test)	AWWA B604, 5.2.7

Representative Sample. At least two weeks prior to delivery to the Water Treatment Plant, CONTRACTOR shall submit to the City a two (2) pound representative sample of each lot of GAC to be delivered. The sample must be submitted in clean, waterproof, vaporproof containers that are identified as to the lot number of the contents. A certified test report shall be submitted to the City along with each sample. CONTRACTOR'S test report indicating the lot number, sample date, and analysis date shall indicate compliance with the specification requirements, along with a statement certifying that the material ready for shipment is equal in quality to the sample submitted. All tests shall be conducted in accordance with the above standards.

The City may authorize delivery of the shipment on the basis of the Contractor's test results and the certification of quality, or the City may test the reference sample submitted to confirm compliance before delivery is authorized. Authorization to deliver material will not constitute acceptance of the GAC.

Contractor shall remove spent filter media from one filter at the Water Treatment Plant and transport it to the Butterfield Landfill for disposal. The filter (756 square feet) consists of two (2) filter cells, each cell having 378 square feet of area.

Contractor shall furnish all necessary hoses, connectors and fittings necessary for delivery of GAC. They shall be clean and free of contaminants. Contractor shall be responsible for cleanup of any spills resulting from delivery operations. All costs associated with the cleanup, removal, and replacement of spilled GAC shall be the responsibility of the Contractor.

GAC installation shall be supervised by a member of the Contractor's technical service staff who has at least 5 years of experience of GAC installation. Any damages resulting from the installation of the GAC is the responsibility of Contractor.

Each filter basin shall be disinfected prior to installation of GAC as specified in Section 13755 and AWWA C653 for the concrete structure and piping.

GAC installation shall comply with AWWA B604, except as modified herein. Materials shall be handled to keep them clean during placement, and any materials becoming contaminated shall be removed and replaced with clean material.

The bottom layer shall be carefully placed to avoid damage to the filter underdrain system. Each layer shall be completed before starting the layer above. Workers shall not stand or walk directly on the GAC, but on boards which will sustain their weight without displacing the GAC. The GAC shall be roughly leveled between layers.

After backwashing as specified herein, the GAC shall fill the contactor to an elevation of 1230.77 as denoted by the painted line. If, after backwashing, the GAC does not cover the line and meet the required elevation, the Contractor shall provide additional GAC until the elevation requirement has been met after backwashing.

After half of each cell has been filled with GAC, and after the second half of each cell has been filled, the GAC shall be backwashed to remove fines. A total of four backwashes per filter are required. Backwashing shall be a single cycle consisting of a low-rate backwash, a ramp up to a high-rate backwash, a ramp down, and another low-rate backwash.

Low-rate backwash shall be at 5.0 gpm/sf (1,900 gpm) and shall be maintained for at least two minutes. The ramp-up period shall be at least two minutes long and the increments of flow shall be no more than 1400 gpm every 30 seconds. Once the high-rate flow of approximately 20 gpm/sf (7,500 gpm) is attained, the high-rate flow shall be maintained for at least four minutes. The high-rate backwash shall be maintained until all fines have been removed from the GAC. The ramp-down period shall be the reverse of the ramp-up period. The final low-rate backwash shall be maintained until the GAC is completely settled, but shall be at least two minutes. The final low-rate backwash shall be at 5.0 gpm/sf (1,900 gpm).

The backwash from the filters is routed to Equalization Basin No. 1. This equalization basin has a limited capacity and the Contractor will need to be cognizant of the limits placed on backwashing during installation.

Each backwash cycle (12 minutes minimum) will generate at least 56,000 gallons. The equalization basin will contain up to 297,000 gallons.

Backwash water supply is the finished water reservoir through the Finished Water Pump Station. Contractor shall coordinate with the City to assure an adequate supply of water for backwashing. Water used for backwashing GAC shall be chlorine-free. The sodium bisulfite chemical feed system may be used for dechlorination.
