SUSTAINABILITY

S1	**Use of Native, Low-Water Landscaping:** Incorporate plant species suited to arid environments and group them by water needs.
S2	**Shade Structures and Canopies:** Require awnings, arcades, and trees to provide 75% sidewalk shade coverage during peak hours.
S3	**On-Site Water Management:** Design bioswales, permeable paving, and curb cuts to direct runoff into landscape basins.
S4	**Cool Surface Materials:** Use light-colored pavers, decomposed granite, or reflective coatings to reduce heat absorption in pedestrian zones.

Sustainability Design Principles

S1: Use of Native, Low-Water Landscaping

Incorporate plant species suited to arid environments and group them by water needs.

Inspiration

S2: Shade Structures and Canopies

Require awnings, arcades, and trees to provide 75% sidewalk shade coverage during peak hours.

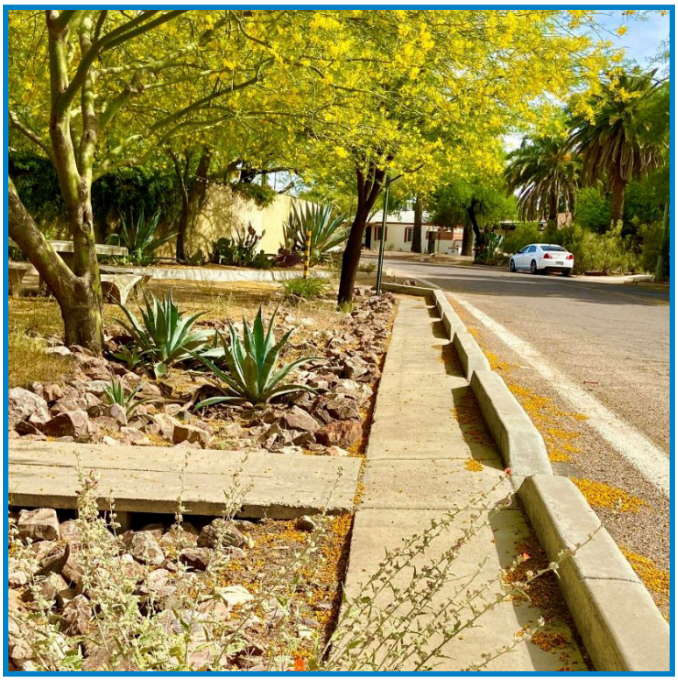
Inspiration

Sustainability Design Principles (Continued)

S3: On-Site Water Management

Design bioswales, permeable paving, and curb cuts to direct runoff into landscape basins.

Inspiration



S4: Cool Surface Materials

Use light-colored pavers, decomposed granite, or reflective coatings to reduce heat absorption in pedestrian zones.
